TOTAL						

*Indicative prices exclusive of carriage and V.A.T.

In order to cost delivery please include delivery address and post code.

Please state installation application i.e. loft, wall, sarking, floor and acoustic:-

Whenever possible it is best to leave in place existing insulation. UK thickness of insulation 270mm for lofts is advised using traditional insulation: (<http://www.est.org.uk/housingbuildings/funding/lowcarbonbuildings>)

Building regulations require 0.16 W/m²K U-value for loft, 0.35 W/m²K for walls, 0.25 W/m²K for floor.(re - <http://www.odpm.gov.uk/> - 2006 Building Regulations).

INNO-THERM @ 250mm would meet current building regulations.

Acoustically and thermally INNO-THERM is similar or exceeds quality and performance standards of traditional insulation products. It rates 10% better than glass fibre in Sound Transmission (STC) and sound absorption.

Visit www.recovery-insulation.co.uk and www.solar-active.com for further information on energy efficiency and renewable energy.

Technical support from the ODPM: 08453-654357. Information on grants from <http://www.est.org.uk/housingbuildings/funding/lowcarbonbuildings> and/or contact your local Energy Efficiency Advice Centre. Ring free **0800512012** to find out location of your local centre. If you are on benefit etc. contact your Local Authority and energy supplier for grants on offer.
